

Why eco-max™?

eco-max

VOLTAGE OPTIMISATION
SAVE MONEY, ENERGY & CARBON

BETFRED

UK's Original VO Manufacturers

With over 25 years of engineering expertise

Extensive Range

Of sizes to perfectly suit your business

Engineer-Led

Designed, built & tested by GWE under ISO9001 Quality systems for reliability

Testimonial

It was decided across the board that implementing a voltage optimisation project would effectively reduce our site voltages to a more desirable level, minimising stresses on branch equipment, reducing overall energy consumption and reducing the cost of our electricity bills” – Len Hodges (Estates Manager, Betfred)

Solution

Betfred decided to use GWE as their voltage optimisation supplier following an extensive search within the VO marketplace. Contributing factors were GWE’s great reputation with blue-chip clients (e.g. Tesco, Amazon, Deutsche Bank) and that GWE were able to produce the volume of units, to a high-quality standard, within specified timeframes, and they considered excellent customer service of paramount importance.

Since the installation electricity consumption across the Betfred chain has reduced overall and they have seen significant energy savings. CO2 emissions have been reduced, and Betfred is closer to meeting its carbon targets. Due to the reduction in voltage spikes and fluctuations from the installation of the eco-max units, electrical equipment on the sites will now have a longer operational life and will work more effectively at the reduced voltage, reducing maintenance costs.
